Electrical Compliance
& Safety Ltd

Bringing Compliance
and Technology Together

Electrical Inspections & Condition Reporting

- **Health and Safety:** We are safe contractor and CHAS approved and have all the necessary safe systems of work in place to ensure projects are completed safely

- **Code of Conduct:** We have our own code of conduct with all our ECS staff adhere to

- **Inspection Data:** Our engineers receive and complete their jobs electronically via iPads and follow a pre-set test process which includes access, inspection, repair and customer satisfaction recording protocols

- **Monitoring accuracy of test results:** An Experienced Contract Manager will be dedicated to overseeing all aspects of daily operational management and supervision. They will ensure the accuracy of test results and complete internal audits on completed inspections

- **Inspection data validation:** This is achieved through robust data collection, validation and auditing process

- **Calibration of test equipment:** All electrical test meters are inspected and checked frequently and externally calibrated

- **Management Information Reporting & Monitoring:** ECS can capture and store a considerable amount of electronic data and information that can be used for performance management and KPI reporting which our customers have access to via a web-based portal

Electrical Installation & Maintenance

Our fully qualified Electricians can provide a full range of electrical installation & maintenance services. ECS Group engineers will complete all installation and maintenance work to the highest standard and in accordance with the latest edition of the BS7671 wiring regulations.

Installations & Maintenance

- The design & installation of new power and lighting systems
- Full or partial rewiring of existing domestic and commercial installations
- Smoke alarm maintenance & installation
- Distribution board replacements & upgrades
- Electrical repairs including fault finding and rectification, replacement of damaged, broken or faulty components
- Security lighting design, installation & repairs
- Switch gear installations, maintenance & repairs

- ECS can provide a full range of design, installation and maintenance services for emergency lighting systems in accordance with the BS5266 and for fire detection and alarm systems in accordance with the BS5839

Data Cabling Solutions

- Network cabling
- Telecoms cabling
- Fibre optic cabling
- Security cabling

Emergency Lighting Testing & Inspections

Our engineers undertake the testing of your emergency lighting to the highest standard complying with the relevant standards.

Emergency lighting systems illuminate escape routes to help ensure that building occupants can escape safely in the events of a mains power failure. ECS provides a range of Emergency Lighting testing services to ensure your installations are well maintained and in good working order so that you can be assured that your systems will work when you need them and guide building users to evacuate safely. Where emergency lighting systems are installed, they are required to provide lightning to escape routes for a minimum of 3 hours in accordance with BS5266. The British Standard also specifies where lights need to be sited and the level of illumination required.

Providing Quality Emergency Lighting & Testing Services

- Carry out 3-hour emergency light battery discharge tests and identify any fittings that fail to provide the required lighting levels at the end of the test period
- Provide a report on all fittings identifying any failures
- Ensure all fittings are appropriately labelled and identifiable
- Check plans and drawings are up to date
- Advise on any improvements required to bring systems up to the British Standard
- Provide a test log book to enable clients to record future checks

Bringing Compliance & Technology Together

We have developed our own bespoke compliance management software (ECMS) to process and manage large volumes of compliance work efficiently, and ensuring our engineers follow consistent, robust, accurate, reliable and efficient inspection processes. The driving force behind designing our own software was due to the lack of suitable applications currently available in the market.

- Bespoke software designed to reflect the inspection & testing sequence
- Engineers follow a consistent, robust, accurate, reliable & efficient process
- Real time reporting and access to certification via dedicated client portals
- As added value our software can also record client tailored survey data as well as certification reports and has inline image capture.
- ECMS provides our clients with real time reporting and access to certification and key performance information on the status of all inspections via dedicated client portals.

Get in touch with ECS to arrange a demonstration of our bespoke inspection and testing software. Call 01536 650722 or email info@ecs-group.co.uk

Why Choose ECS ?

At ECS, we always aim to deliver a successful outcome for our clients, their tenants, residents and building users. Our team of experts work with the latest technology to manage your project from onsite engineers to office staff.

ECS engineers are supported by a dedicated team at head office providing administration, IT, contract management and human resources. ECS specialises in providing fixed Electrical Installation Condition Reporting and Repairing services, safeguarding residents and their families throughout the United Kingdom, making sure that their homes and your assets are both compliant and safe to use.

- We are one of the Founder Members of the AESM and we are committed to improving electrical standards and awareness within the industry.

- Award-winning service provider, the 2019 ASCP 'Electrical Contractor of the Year'. We were also winners of the AGSM Electrical Safety Collaboration Award 2017 and Electrical Safety Supplier Support Award 2017.

- We have developed our own bespoke software, "Bringing Compliance and Technology Together", ensuring our engineers follow consistent, robust, accurate, reliable and efficient inspection processes.

As added value our software can also record client tailored survey data as well as Certification Reports and has inline image capture. It also provides real time reporting and access to certification and key performance information on the status of all inspections via dedicated client portals.
